Please help make the computing and operating system market fun and vibrant again by making Microsoft less powerful by reducing the power of their monopolistic power over the industry. Here are some ideas:

1. Make Microsoft ship full featured versions of all there desktop software for ALL competing Operating Systems. This is not just MS Office but ALL of their desktop applications like MS Project, Visio, Publisher, etc...

2. Make Internet Explorer FULLY COMPLIANT with WC3 standards

3. Make Microsoft to fully integrate Suns JAVA in all versions of the windows OS

4. Create a committee that reviews MS behavior on a quarterly basis

5. Make all Microsoft network protocols and file systems cross compatible with Linux and the Mac by default.
